

5 REASONS TO TRY PREP

Approximately 1 in 8 people living with HIV in the US did not know they had it in 2016*

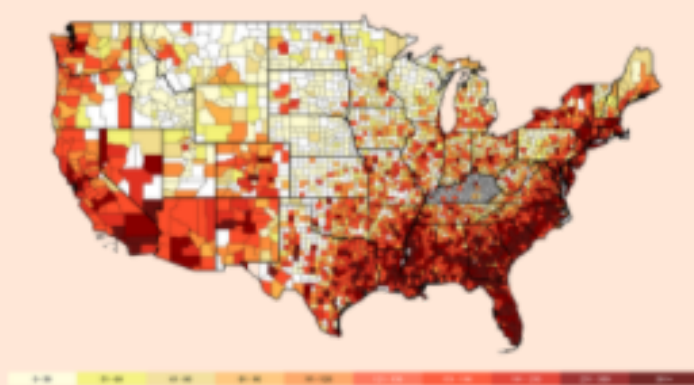

In 2016, only 27% of PrEP medicine users lived in the South*

In 2016, only 78,360 people filled prescriptions for PrEP out of an estimated 1.1 million people who were eligible*

When taken as prescribed, PrEP reduces the risk of getting HIV by about 99%*

More than half (51%) of HIV diagnoses occurred in 2019 were from people living in the South even though only 38% of the US population lives in this region*
